2019 2020 school calendar ocps

Like to-do lists, calendars help provide the illusion of organization and control over tasks and commitments. But not just any calendar. At least it's my theory that if you're not interested in the style and layout of the calendar software or calendar format you use to track events, you probably don't need a calendar. Maybe it's a matter of taste or aesthetics, maybe it's a touch of OCD. But if you're some sort of in-person calendar, you've got some decent options heading into the New Year. Word has always been lacking in offering useful built-in calendar templates, heavy on ugly design elements and light on features. So I built this little bare-bones model that automatically enters dates for you depending on the number of days you specify. There is space to enter your appointments and activities. And not much else. It's simple but practical. (You can stick some clipart in there if you feel the need. Snowflake for January, whatever.) Then you have the slicker choices, courtesy of Microsoft Office Online. These are prefabricated calendars for various applications and purposes. Sixty-four of them, altogether. There are loads of academic calendars in Visio, Excel, Publisher, and Word format. Calendars by month, year and multi-year. Portrait, landscape, five days, seven. An incredibly ugly variety of PowerPoint calendars, including some misleading stripes and some sort of Madras plaid. Lunar calendars for different time zones (which knew the moon operated that way), photo calendars, postcard calendars. And also a basic 12-month calendar in Word without a single piece of art deco design nonsense about it. If your taste goes that way. Good calendar! Whether you're a teacher or a student, you can get organized for the school year with these special calendars. Print or download a free template from one or more of the sites listed below. If you click on the site, you will find that most of these sites update before the new school year. These empty calendars in some basic formats can be customized and used in any year. Choose from a variety of child-facing calendars for class or home. School year calendars, a teacher scheduling calendar, and a schedule calendar are also offered. Publisher and Word formats provide several calendar styles for current years. Most are monthly calendars, although some are one-year calendars of a page, and there are also a couple of photo calendar templates. The 15-month school year calendar is large and small for the current school year plus previous years. Other links on the page go to calendars of different types, such as weekly and monthly planners. Excel templates automatically update each calendar year. Formats include 14 months (July to August), landscapes and portraits, and an annual calendar of 12 and 14 months. The download includes the entire collection in different color combinations, and you can also customize the month of departure with the Model. These 14-month, full-year monthly calendars come in horizontal and vertical layouts and different colors. There are templates for Excel and downloadable PDF printable calendars that are available in Monday-first and Sunday-before formats, some with holidays. The style is leaner and more sophisticated, with use by colleges and universities in mind. Also available in the school calendar collection download from The Calendar Nexus, these Excel files create a very simple class program template that is great for high school and college students. There are models divided into 30-minute increments and 15-minute increments. Like many Mesoamerican calendars, the Tzolk'in calendar, or Sacred Round, operated over a 260-day cycle. One theory for the meaning of its cycle duration is that the 260 days are related to pregnancy [source: Maya Mystery School]. Another proposes that the calendar represented the period of time to grow corn. However, it is more likely to have been based on the reverence of the Mayans for numbers 13 and 20. In the Gregorian calendar, we have seven days of the week and, depending on the month, anywhere from 28 to 31 days. The Tzolk'in calendar consists of a set of 20-day names, symbolized by images called phils, and 13 numbers called tones. The days are numbered from one to 13, and the names are also given sequentially. Announcement The beginning of the Tzolk'in calendar begins with the name of the first day, Imix', and the number one. The days continue in sequence, with the second day being a combination of 'k' and number two; the names and numbers of the days combine sequentially until all 13 tones are used. Once the calendar reaches day 13, indicated by B'en and number 13, the numbers start again with one, but the names of the days advance with glyph 14, Ix. Rotating in this way, the two sets form 260 unique combinations of a day name and a number. For example, once the end of the day name cycle with 7 Ajaw is reached, the names of the days start over at Imix', and the numbers continue: 8 Imix', 9 Ik', 10 Ak'b'al, and so on. This content is not compatible on this device. Think of two intertwined gears, with the 13 numbers spaced around a smaller circular gear that fits inside the larger gear than the names of the days indicated in hieroglyphics. If you lock those gears along with the number one and the day name Imix', then rotate the gears until you reach one and Imix' again, you will get 260 unique days. These gears spin until the final combination clicks into place at 13 Ajaw, marking the end of the year. It's easy to see what the Mayans put in Tzolk'in's calendar. For example, they believed that the date of your birth determined the characteristics that you will show in your personality, as some people believe that your astrological sign does today. The Saints also schedule some events throughout the year according to Tzolk'in's calendar. At the beginning of each uinal (20-day period), a shaman would count to determine when religious and ceremonial events will occur. He would then select dates that would be the most prosperous or most fortunately for the community. Despite its myriad functions, the Tzolk'in calendar still could not measure a calendar year, the time it takes the sun to make a full cycle. For this reason, the Mayans needed a more precise timetable to keep track of the period of time we consider a whole year. The Monkeymen calendar is ready for people who like to have an updated printout of the program of the month posted on the refrigerator or hidden in a sheet metal protector at the front of a binder. It is very easy to use (install the trial version and you will be able to watch a 90-second video tutorial). Type the scheduled events for the month in question, add some items to the to-do list, customize the overall look with just a few clicks, and print it out. No hustle and bustle with models or PowerPoint. If the calendar is visually appealing with a choice of 16 unique backgrounds (ranging from subdued steel-blue to high-energy monkey faces) and colorful stickers that you can use to represent special events such as soccer games, birthday parties, and vacations. You can also make your stickers on all and models quite easily. You will also rely on these stickers, because the text you tilt is quite small and a little difficult to read. At least the elements of the To-Do List are large and bold. A photo in the upper right corner can be switched to one of your own, or another of the stock images provided by Monkeymen.--Leigh Anne Jones Note: When you buy something after clicking links in our articles, we may earn a small commission.
